- 1 Introduction to data on *schlagen*
 - Animacy and the force component
 - Inanimacy and the force component
 - Modification by *spielerisch* - 1
 - Modification by *spielerisch* - 2
- 2 A frame analysis of *schlagen*
 - Modelling the hitting and to be hit entities
 - Modelling the movement component
 - Modelling the force component
 - Bringing it all together
 - *spielerisch* again
- 3 Conclusion

With an animate agent in a transitive construction, *schlagen* is typically associated with high force. However, this inference/expectation can be cancelled.

With an animate agent in a transitive construction, *schlagen* is typically associated with high force. However, this inference/expectation can be cancelled.

- (1) a. Sie schlug ihn $\sqrt{\text{leicht}}/\sqrt{\text{hart}}$.
 \approx She hit him $\sqrt{\text{lightly}}/\sqrt{\text{hard}}$.
- b. Sie schlug ihn, aber $\sqrt{\text{leicht}}/\# \text{hart}$.
 \approx She hit him, but $\sqrt{\text{lightly}}/\# \text{hard}$.

With an animate agent in a transitive construction, *schlagen* is typically associated with high force. However, this inference/expectation can be cancelled.

- (1) a. Sie schlug ihn $\sqrt{\text{leicht}}/\sqrt{\text{hart}}$.
 \approx She hit him $\sqrt{\text{lightly}}/\sqrt{\text{hard}}$.
- b. Sie schlug ihn, aber $\sqrt{\text{leicht}}/\# \text{hart}$.
 \approx She hit him, but $\sqrt{\text{lightly}}/\# \text{hard}$.

- small questionnaire study shows that acceptance drops by 50% when *hart* is used as opposed to *leicht* in (1b)

With an animate agent in a transitive construction, *schlagen* is typically associated with high force. However, this inference/expectation can be cancelled.

- (1) a. Sie schlug ihn $\sqrt{\text{leicht}}/\sqrt{\text{hart}}$.
 \approx She hit him $\sqrt{\text{lightly}}/\sqrt{\text{hard}}$.
- b. Sie schlug ihn, aber $\sqrt{\text{leicht}}/\# \text{hart}$.
 \approx She hit him, but $\sqrt{\text{lightly}}/\# \text{hard}$.

- small questionnaire study shows that acceptance drops by 50% when *hart* is used as opposed to *leicht* in (1b)
- high force inference due to agentivity (agent has intention to hit with high force); however, inference can be cancelled (cf. 1b), if e.g. the hit goes amiss

With an inanimate subject in a directional construction, no expectations as to the force of *schlagen* arise. Both high and low force are possible.

With an inanimate subject in a directional construction, no expectations as to the force of *schlagen* arise. Both high and low force are possible.

- (2)
- a. Der Regen schlug \surd leicht/ \surd hart ans Fenster.
≈ The rain hit the window \surd lightly/ \surd hard.
 - b. Der Regen schlug ans Fenster, aber #leicht/#hart.
≈ The rain hit the window, but #lightly/#hard.

With an inanimate subject in a directional construction, no expectations as to the force of *schlagen* arise. Both high and low force are possible.

- (2) a. Der Regen schlug \surd leicht/ \surd hart ans Fenster.
 \approx The rain hit the window \surd lightly/ \surd hard.
- b. Der Regen schlug ans Fenster, aber #leicht/#hart.
 \approx The rain hit the window, but #lightly/#hard.

	hit lightly	hit hard	hit, but lightly	hit, but hard
the rain & the window	100%	93,75%	36,37%	75%
the guitar & the table	100%	92,85%	37,50%	35,72%
the tree & the car	25%	63,63%	21,43%	36,37%

Table: Results of the inanimate constructions with *hart* and *leicht*: percentages show ratings for 'maybe good' and 'clearly good'

With an inanimate subject in a directional construction, no expectations as to the force of *schlagen* arise. Both high and low force are possible.

- (2) a. Der Regen schlug $\sqrt{\text{leicht}}/\sqrt{\text{hart}}$ ans Fenster.
 \approx The rain hit the window $\sqrt{\text{lightly}}/\sqrt{\text{hard}}$.
- b. Der Regen schlug ans Fenster, aber $\#\text{leicht}/\#\text{hart}$.
 \approx The rain hit the window, but $\#\text{lightly}/\#\text{hard}$.

	hit lightly	hit hard	hit, but lightly	hit, but hard
the rain & the window	100%	93,75%	36,37%	75%
the guitar & the table	100%	92,85%	37,50%	35,72%
the tree & the car	25%	63,63%	21,43%	36,37%

Table: Results of the inanimate constructions with *hart* and *leicht*: percentages show ratings for 'maybe good' and 'clearly good'

- no animate agent = no intention (to hit with high force) = no inference about force

Agent-oriented manner adverbs such as *spielerisch* (playfully) can only apply to *schlagen* in the case of an animate agent.

Agent-oriented manner adverbs such as *spielerisch* (playfully) can only apply to *schlagen* in the case of an animate agent.

- (3) a. √Sie schlug ihn *spielerisch*.
√She hit him playfully.
- b. #Der Regen schlug *spielerisch* ans Fenster.
#The rain hit the window playfully.

Agent-oriented manner adverbs such as *spielerisch* (playfully) can only apply to *schlagen* in the case of an animate agent.

- (3) a. ✓Sie schlug ihn *spielerisch*.
✓She hit him playfully.
- b. #Der Regen schlug *spielerisch* ans Fenster.
#The rain hit the window playfully.

	hit playfully
the rain & the window	37,50% (50%)
the guitar & the table	0% (45,50%)
the tree & the car	0% (0%)

Table: Results of the inanimate constructions with *spielerisch*: percentages show ratings for 'clearly good' ('maybe good' and 'clearly good')

Agent-oriented manner adverbs such as *spielerisch* (playfully) can only apply to *schlagen* in the case of an animate agent.

- (3) a. ✓Sie schlug ihn *spielerisch*.
 ✓She hit him playfully.
- b. #Der Regen schlug *spielerisch* ans Fenster.
 #The rain hit the window playfully.

	hit playfully
the rain & the window	37,50% (50%)
the guitar & the table	0% (45,50%)
the tree & the car	0% (0%)

Table: Results of the inanimate constructions with *spielerisch*: percentages show ratings for 'clearly good' ('maybe good' and 'clearly good')

- data present neither clear case for nor against claim

Agent-oriented manner adverbs such as *spielerisch* (playfully) can only apply to *schlagen* in the case of an animate agent.

- (3) a. √Sie schlug ihn *spielerisch*.
√She hit him playfully.
- b. #Der Regen schlug *spielerisch* ans Fenster.
#The rain hit the window playfully.

	hit playfully
the rain & the window	37,50% (50%)
the guitar & the table	0% (45,50%)
the tree & the car	0% (0%)

Table: Results of the inanimate constructions with *spielerisch*: percentages show ratings for 'clearly good' ('maybe good' and 'clearly good')

- data present neither clear case for nor against claim
- natural forces can easily be conceptualised as animate ('pathetic fallacy')

Agent-oriented manner adverbs such as *spielerisch* (playfully) can only apply to *schlagen* in the case of an animate agent.

- (3) a. √Sie schlug ihn *spielerisch*.
√She hit him playfully.
- b. #Der Regen schlug *spielerisch* ans Fenster.
#The rain hit the window playfully.

	hit playfully
the rain & the window	37,50% (50%)
the guitar & the table	0% (45,50%)
the tree & the car	0% (0%)

Table: Results of the inanimate constructions with *spielerisch*: percentages show ratings for 'clearly good' ('maybe good' and 'clearly good')

- data present neither clear case for nor against claim
- natural forces can easily be conceptualised as animate ('pathetic fallacy')
- prototypical example with tree (one hit, clearly not animated) shows pattern as expected

The modified construction *spielerisch schlagen* (to hit playfully) is typically associated with low force. However, this can be cancelled.

The modified construction *spielerisch schlagen* (to hit playfully) is typically associated with low force. However, this can be cancelled.

- (4) a. Sie schlug ihn *spielerisch*, aber doch recht $\sqrt{\text{hart}/\#leicht}$.
She hit him playfully, but still rather $\sqrt{\text{hard}/\#lightly}$.

The modified construction *spielerisch schlagen* (to hit playfully) is typically associated with low force. However, this can be cancelled.

- (4) a. Sie schlug ihn *spielerisch*, aber doch recht $\sqrt{\text{hart}/\#leicht}$.
She hit him playfully, but still rather $\sqrt{\text{hard}/\#lightly}$.
- 85.71% found the sentence in (4) with *hart* 'maybe good' or 'clearly good'

The modified construction *spielerisch schlagen* (to hit playfully) is typically associated with low force. However, this can be cancelled.

- (4) a. Sie schlug ihn *spielerisch*, aber doch recht \surd hart/#leicht.
She hit him playfully, but still rather \surd hard/#lightly.
- 85.71% found the sentence in (4) with *hart* ‘maybe good’ or ‘clearly good’
 - inference due to semantics of *spielerisch*: something being done “in play”, with no (lasting) effect in the “real world” intended

The modified construction *spielerisch schlagen* (to hit playfully) is typically associated with low force. However, this can be cancelled.

(4) a. Sie schlug ihn *spielerisch*, aber doch recht $\sqrt{\text{hart}/\#leicht}$.
She hit him playfully, but still rather $\sqrt{\text{hard}/\#lightly}$.

- 85.71% found the sentence in (4) with *hart* ‘maybe good’ or ‘clearly good’
- inference due to semantics of *spielerisch*: something being done “in play”, with no (lasting) effect in the “real world” intended
- inference can be cancelled, if e.g. something intervenes

- 1 Introduction to data on *schlagen*
 - Animacy and the force component
 - Inanimacy and the force component
 - Modification by *spielerisch* - 1
 - Modification by *spielerisch* - 2

- 2 A frame analysis of *schlagen*
 - Modelling the hitting and to be hit entities
 - Modelling the movement component
 - Modelling the force component
 - Bringing it all together
 - *spielerisch* again

- 3 Conclusion

Hit-verbs have several general components found with most of their uses (Levin, 1993):

Hit-verbs have several general components found with most of their uses (Levin, 1993):

- the hitting and to be hit entities

Hit-verbs have several general components found with most of their uses (Levin, 1993):

- the hitting and to be hit entities
- contact/movement

Hit-verbs have several general components found with most of their uses (Levin, 1993):

- the hitting and to be hit entities
- contact/movement
- force

Modelling the hitting and to be hit entities

- (5) a. Katja schlug die Flasche gegen den Tisch.
Katja hit the bottle against the table.

Modelling the hitting and to be hit entities

- (5) a. Katja schlug die Flasche gegen den Tisch.
Katja hit the bottle against the table.

Modelling the movement component

path: (cf. Zwarts, 2005; Naumann, 2013)

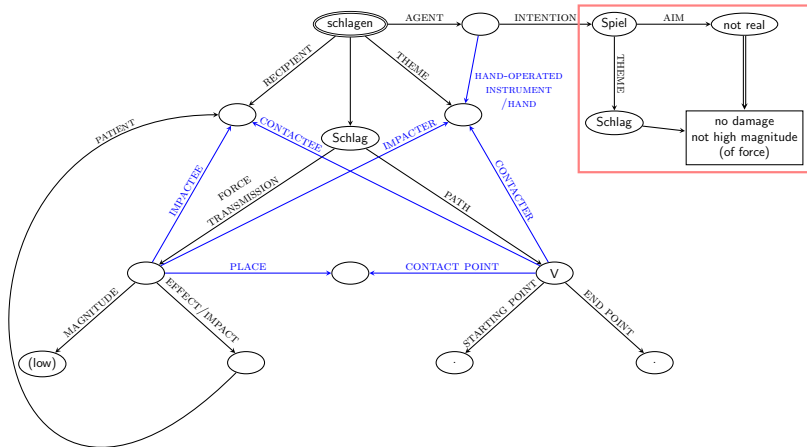

V = path of movement

Modelling the force component

force transmission: (cf. Talmy, 2000; Copley & Harley, 2015)

spielerisch again

- 1 Introduction to data on *schlagen*
 - Animacy and the force component
 - Inanimacy and the force component
 - Modification by *spielerisch* - 1
 - Modification by *spielerisch* - 2
- 2 A frame analysis of *schlagen*
 - Modelling the hitting and to be hit entities
 - Modelling the movement component
 - Modelling the force component
 - Bringing it all together
 - *spielerisch* again
- 3 Conclusion

We have shown:

We have shown:

- that the use of *schlagen* (to hit) in various contexts depends on several aspects of its (lexical) semantics: the presence/absence an intentional agent, the magnitude of the force transmission
→ high force expectancy in case of agent, no such expectation otherwise

We have shown:

- that the use of *schlagen* (to hit) in various contexts depends on several aspects of its (lexical) semantics: the presence/absence an intentional agent, the magnitude of the force transmission
→ high force expectancy in case of agent, no such expectation otherwise
- that the modification of *schlagen* through certain manner adverbs such as *spielerisch* (playfully) depends on its (lexical) semantics: the presence/absence an intentional agent
→ modification only possible in case of agent

We have shown:

- that the use of *schlagen* (to hit) in various contexts depends on several aspects of its (lexical) semantics: the presence/absence an intentional agent, the magnitude of the force transmission
→ high force expectancy in case of agent, no such expectation otherwise
- that the modification of *schlagen* through certain manner adverbs such as *spielerisch* (playfully) depends on its (lexical) semantics: the presence/absence an intentional agent
→ modification only possible in case of agent
- that the modification of *schlagen* through adverbs such as *spielerisch* results in inferences changing certain aspects of the verb's lexical semantics
→ low force expectancy in case of modification

We have shown:

- that the use of *schlagen* (to hit) in various contexts depends on several aspects of its (lexical) semantics: the presence/absence an intentional agent, the magnitude of the force transmission
→ high force expectancy in case of agent, no such expectation otherwise
- that the modification of *schlagen* through certain manner adverbs such as *spielerisch* (playfully) depends on its (lexical) semantics: the presence/absence an intentional agent
→ modification only possible in case of agent
- that the modification of *schlagen* through adverbs such as *spielerisch* results in inferences changing certain aspects of the verb's lexical semantics
→ low force expectancy in case of modification
- how to model the lexical aspects of *schlagen* and *spielerisch* in Frame Semantics á la Barsalou (1992) and Petersen (2007)
